Working the vineyard

The vineyard is cultivated in a traditional way with parcel management: soil plowing, grassing, diversity.... Mechanical leaf removal and green harvesting. A selection of plots is made, favoring old vines.

Vinification

Destemming and crushing of the harvest, followed by cold maceration for five days in order to extract a maximum of aromas. Alcoholic and malolactic fermentations are carried out in tanks with temperature control. The duration of high-temperature maceration and final hot maceration lasts between 18 to 30 days depending on the tank to obtain a maximum of concentration and balance.

Ageing

The wine is aged in new oak barrels for 18 months and bottled on the property.
